

HiGS Health Solutions

for Comprehensive Health Histories The miniHiGS - a Subset of Specific Protocols for Licensing for Targeted Application.

*Our Health Information
Gathering System – HiGS*

→ Provides Differentiation within Health Technology Markets: **HiGS Preventive Care Technology** through history gathering for identifying risk; where Western methods meet integrative medical models.

→ **miniHiGS** is a lite version of the HiGS which allows one or more specific HiGS Histories or Assessments to be used on a limited basis by a user prior to a targeted procedure or application. The **miniHiGS** does two main things: **1)** it collects, stores, and retrieves data from a specific selected protocol(s) prior to a procedure. **2)** it provides a results report called a **Targeted Health History Report (THHR)**.

Inner Reach® Lite Version - miniHiGS Health Solutions

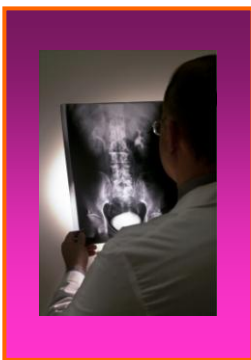

Targeted Health Area of User
History for efficient and quality
IT delivery and care.

Our Health Information Gathering System—HiGS

Inner Reach is a Health Information Gathering Preventive Care Technology company that offers a comprehensive battery of history protocols for users to interactively take, retake, and retrieve to identify risk, preserve health, and prevent and delay disease.

The Inner Reach miniHiGS offered to individuals by a third party through a licensing agreement with Inner Reach, enables the user to take a specific HiGS History or Assessment prior to a procedure, resulting in a Targeted Health History Report (THHR). The THHR results report can be read quickly at the start of various procedures and interventions to help figure out next steps and points of focus. Technicians, radiologists, and other health professionals can have more information available prior to performing a procedure enabling a better chance at identifying risk for disease.

Everything is affected by histories, including blood testing, imaging, procedures, diagnosing, proper interventions, and health preservation. We need histories to figure out what is going on. To obtain adequate histories we need the input of the individual. Without their accurately communicated story, all care falls short. When we have correct information prior to procedures, we can know more, save time, and cost, while minimizing repetition.

A targeted accurate history about a particular health area prior to having a procedure such as imaging is needed to identify risk, make diagnoses, and save time, suffering, and money. Time constraints reduce opportunities for accurate and more comprehensive historical data to be collected by technicians, radiologists and healthcare professionals prior to procedures. Their time costs money. miniHiGS meets these needs.

Co-branding

Companies, institutions, and governments that purchase a licensing agreement from Inner Reach for a miniHiGS targeted health area can select to have a co-branded miniHiGS web page for a seamless look. Co-branding demonstrates compatibility.

Licensing of the miniHiGS

- miniHiGS is a custom piece, since it must match various spelled-out needs of an entity, including software applications while meeting technology and procedures of Inner Reach.
- A license agreement will allow a user to logon to the miniHiGS to take a specified HiGS History or Assessment and Screening or even Body System (signs and symptoms collection) companioned to a procedure or situation spelled out in the license agreement.
- Allows a user to interactively take the protocol(s) specified in the license agreement and have a results report - Targeted Health History Report generated immediately
- The THHR can be printed, electronically sent, faxed, retrieved, and stored.

Development of miniHiGS Protocol Bundled with an Entity's Target Health Area

Goals include:

- Ensuring diligent development to companion the miniHiGS protocol(s) with the licensing entity's software technology to obtain the designated results
- Anticipating and helping to manage the technology transfer
- Working in an open and collegial manner with those directly responsible
- Having a designated mutual administrative channel and reporting point
- Implementing of practices and strategies that will advance the synergistic efforts of both Inner Reach and the entity with the miniHiGS license
- Striving to stay within a designated schedule
- Development is contingent upon the software and systems of the licensing entity's capabilities and requirements
- Developing a co-branded web site and integration of THHR for the purposes needed
- Developing a smooth seamless appearing bundling of each component in the agreement
- Providing a high standard of excellence while keeping development costs within the framework of the agreement

End Product Bundled into Some Program

When facilities have HiGS Preventive Care Technology bundled into some program, they are better prepared to handle a big work load. Doctors, nurses, radiologists, and technicians are also more apt to benefit from having at-a-glance type of information in a variety of areas, now limiting their time to targeted questions based upon what is already known. HiGS comprehensive histories whether gleaned from the complete HiGS or miniHiGS are the fundamental underpinnings to health and decisive information to detect risk.

Examples of **miniHiGS** Targeted Health Areas

miniHiGS is a custom product in that it is developed to be synergist for each entity's specific needs which work within Inner Reach technology and practices.

Examples of **miniHiGS** Imaging Areas:

- Basic pre-imaging questionnaire: contraindications for having a procedure performed; rule out allergies; contrasting agents reactions; metal present in the body; pregnancy, etc.
- HiGS Breast Cancer Assessment and Screening for Women – Mammography
- HiGS Breast Cancer Assessment and Screening for Men – Mammography
- HiGS Colon Cancer Assessment and Screening – Lower GI series; Colonoscopy

Examples of **miniHiGS** Major Health Issues' areas:

- Metabolic Syndrome – General Screening of health for Company employees
- Type II Diabetes – Government Program to Help Manage Type II Diabetes

Examples of **miniHiGS** Blood Testing areas:

- HiGS Heart Checks assessment and Screening – Blood Tests: Hg A1C (glucose; sugar) Cholesterols (LDL;HDL); Triglycerides, Homocysteines; Ferritin (iron overload);
- HiGS Prostate Cancer Assessment and Screening – Prostate Specific Antigen (PSA) Blood Test
- HiGS Hepatitis C Assessment and Screening – Hepatitis C Blood Test

HiGS – Integrative Methods for the World Stage

Culture components are built into the **HiGS** in various ways. Awareness of cultural aspects is essential to understand health needs and ways in which culture impacts health. Governments are addressing particular health issues among populations. **HiGS** can reorder emphasis and target health problems areas to accommodate these government needs. **HiGS** is based on Western medicine, nursing, and DSM-IV psychiatric standards criteria; **HiGS** includes a variety of integrative medical models used around the world.

About **Inner Reach** - Lifesaving Knowledge is One Click Away

As a Stewardship for Humanity[®], **Inner Reach** is committed to the design, development, and delivery of individual centered health information gathering with the highest standards of excellence. We wrap together software technology, Internet technology, and health psychology. Health psychology is based on health and preventive care using a genetic-biological-physical-psychological-sociological-medical model, including nutritional, environmental, cultural, and occupational components. Founded in 1996 and incorporated in 1998, the **Inner Reach Corporation** is headquartered in Oklahoma City, Oklahoma, USA.
